## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mizuno et al in view of JP3-244928.

Mizuno et al discloses a ceramic heater for heating a semiconductor comprising a ceramic substrate in a disc form and a resistance heating element formed on the surface of the ceramic substrate wherein the ceramic heater is equipped with a temperature measuring means (125), and the ceramic heater is divided into at least two circuits and different power is supplied to each of the circuits based on the calculated electric power (column 6, lines 36-50; column 7, lines 1-43). Mizuno et al does not disclose a memory unit, an operation calculation unit, and a thermoviewer. JP3-244928 discloses a memory unit, an operation calculation unit (abstract). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the memory unit and operation calculation unit of JP3-244928 in the ceramic heater of Mizuno et al because, a memory unit and operation calculation unit allows the temperature of the heating element to be controlled more accurately. In addition, while Mizuno et al in view of JP3-244928 does not disclose a thermoviewer as a temperature measuring means

Art Unit: 3742

Mizuno et al does disclose a thermocouple as a temperature means and which serves the same purpose of a thermoviewer.

***Response to Arguments***

3. Applicant's arguments filed 3/1/04 have been fully considered but they are not persuasive. Applicant argues that Mizuno does not teach an operation unit. Mizuno et al discloses a ceramic heater with an embedded resistance heater including a temperature measuring means and at least two circuits and different power supplied to each of the circuits and JP3-244928 discloses a memory unit, an operation calculation unit. Therefore the rejection is valid.

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
